

HEPATITIS A (HepA) VACCINE

HEPATITIS A IS A SERIOUS LIVER DISEASE

**HepA virus spreads through contact
with the stool of infected people**

- This can happen easily because of poor handwashing.
- You can also get hepatitis A from food, water or objects handled by people who are infected.

HEPATITIS A VACCINE
is recommended to all people
age 6 months and older before
international travel to areas
where HepA is common.
