

TETANUS, DIPHTHERIA, PERTUSSIS VACCINE

TETANUS, DIPHTHERIA, AND PERTUSSIS

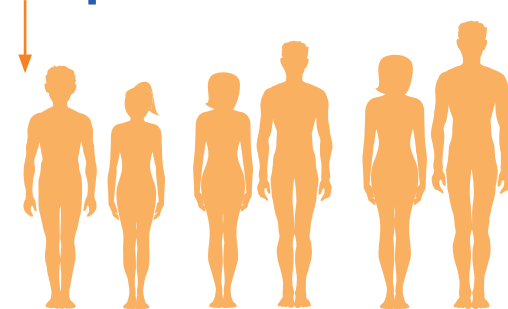

Babies and younger children are vaccinated against these diseases with the DTaP vaccine, but immunity decreases over time. A booster shot called Tdap (tetanus, diphtheria, acellular pertussis) vaccine helps protect older children and teens from the same diseases.

DTaP VACCINE

AGES 0-10

Tdap VACCINE

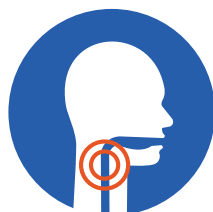

AGES 11-12

TETANUS
